

I am against the use of exposed or open line BPL.
BPL poses a serious problem for any user of the HF Spectrum.

This would include Amateur Radio Operators,
Short Wave Listeners, Military and Transportation services.
BPL drowns out many AM broadcast stations on the 550 Khz. to
1700 Khz. frequencies.
The broadcasters will complain that they are not able to reach the current
market with their advertising and programming.

For example, in Emmaus, PA, where BPL has been already
been placed into service. Many listeners in Emmaus cannot hear KYW AM 1030 kcs.
in Philadelphia, running 50,000 watts power.

BPL also renders the HF spectrum useless to Amateur
Radio Operators within 100 meters of the exposed BPL lines.

Currently Cable Services deliver similar services via "Closed Circuit" cables
and fiber optics.

Leakage of the Cable Services into the HF spectrum are
severely dealt with by the FCC. Leakage of BPL into the HF spectrum will not
even be a violation as open wire cannot suppress leaking
of RF.

If BPL is permitted, it should be only on shielded and filtered lines, similar
to those required by the cable TV industry.
RF signals are not supposed to escape from or intrude into the
cable TV lines. Radio signals can coexist with cable
signals even on the same frequencies.
Havoc occurs when signals leak into and out of the cables.
Are the BPL users going to establish replacements for the current
amateur radio emergency communications stations?

Currently, we hams frequently contend with noisy electric power lines, hardware,
and transformers which interfere with our reception.
The FCC requires the electric utilities to repair and clean up
those lines. Our local electric utilities, are very cooperative, compliant, and
helpful.
Please do not allow any change by allowing "open wire BPL."
During emergencies, how will we communicate?

Even if BPL is turned off during emergencies,
what hams will be left to communicate?

They will have quit in disgust, sold their equipment, and
dismantled their stations.

The FCC must protect the non commercial communications
interests that invade the HF spectrum.

To damage the HF infrastructure of over 1 million licensed amateur radio
operators, is to remove the backbone of emergency communications.

There are better ways to accomplish the same goal that the power industry is
seeking. Lets build covered bridges around the problem, not clear the village of
all the infrastructure.
